

uniPaaS is our programming tool. The tool is SCC-compliant.

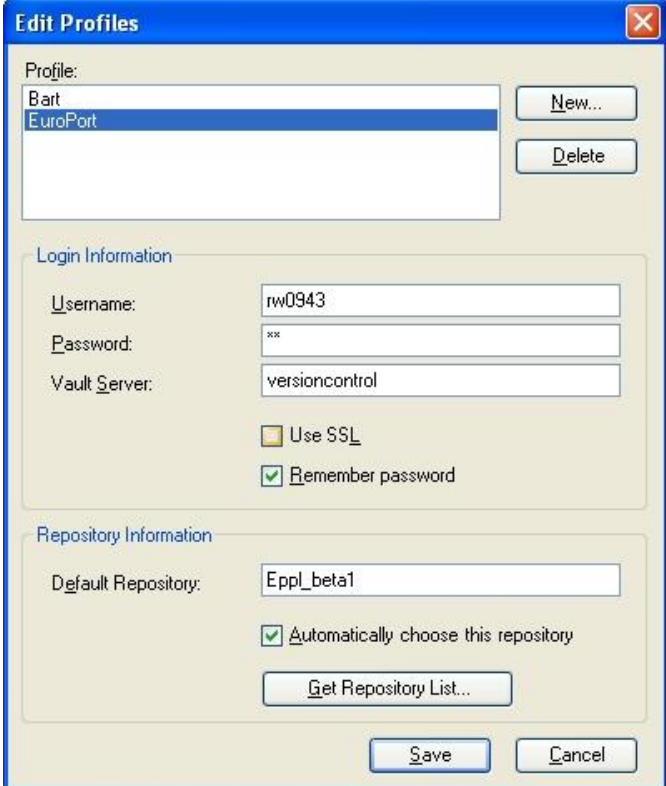

The tool connects using the following file:

```
1 <?xml version="1.0" encoding="UTF-8" standalone="no" ?>
2 <Application>
3
4   <Project>
5     <ProjectName val="Login - lo"/>
6     <VCActive val="Y"/>
7     <WorkOffline val="N"/>
8     <VCProjectName val="$/trunk/Projects/lo"/>
9     <VCProjPath val="http://versioncontrol/VaultService|EuroPort:4"/>
10    <SourceDirectory val="Source"/>
11    <ExportsDirectory val="Export"/>
12    <GUID val="{04D52828-F4BF-45B8-9DFD-3BB3A52F2954}" />
13  </Project>
14 </Application>
```

In the Vault client I'm using the following settings:

The "Connect To Server" dialog box is shown. It has a title bar with a close button. The "Login Information" section contains fields for Username (rw0943), Password (masked with \*\*), and Vault Server (versioncontrol). There is a checkbox for "Use SSL" which is unchecked. The "Select Profile" section has a dropdown menu showing "EuroPort" and a button labeled "Edit Profiles...". Below this is a checkbox for "Automatically connect using this profile" which is checked. At the bottom are buttons for "OK", "Cancel", and "Help".

The "Edit Profiles" dialog box is shown. It has a title bar with a close button. The "Profile:" section has a list box with "Bart" and "EuroPort" (selected), and buttons for "New..." and "Delete". The "Login Information" section contains fields for Username (rw0943), Password (masked with \*\*), and Vault Server (versioncontrol). There are checkboxes for "Use SSL" (unchecked) and "Remember password" (checked). The "Repository Information" section has a field for "Default Repository" (Epl\_beta1), a checkbox for "Automatically choose this repository" (checked), and a button labeled "Get Repository List...". At the bottom are buttons for "Save" and "Cancel".

Now my problem:

On my computer uniPaaS automatically logs in using the above setting. When I change the setting to user “Bart”, uniPaaS also logs automatically in.

On Bart’s computer uniPaaS NEVER wants to log in automatically. Not with my account neither with Bart’s account.

With both accounts I get the following error message:

When I log in with the Vault client after the error message I see the following setting:

The option for automatic login is unchecked
