Our programming tool is uniPaaS from Magic Software Enterprise (Israel). This tool can be integrated with CVS systems with SCC API.
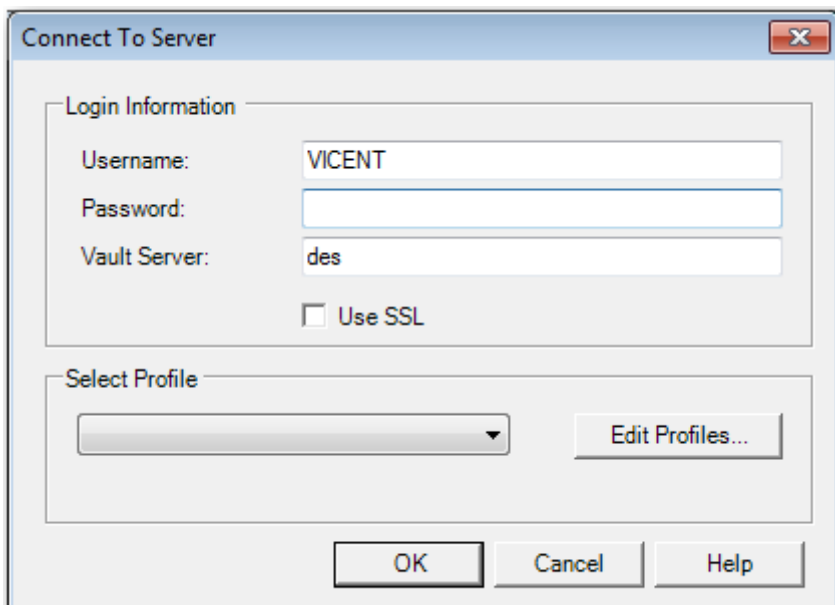

This is the content of the xml that define the parameters of an uniPaas Project.

Wee highlight the parameter that point to the Project.

```
[1] !D:\unipaas\FastAG\FASTAG.edp
<?xml version="1.0" encoding="UTF-8" standalone="no" ?>
<Application>

  <Project>
    <ProjectName val="FASTAG"/>
    <VCActive val="Y"/>
    <WorkOffline val="N"/>
    <VCProjectName val="$/FASTAG"/>
    <SourceDirectory val="Source"/>
    <ExportsDirectory val="Export"/>
    <GUID val="{7CE1DB93-4FEC-4EEA-93A9-1B069634C6EA}"/>
  </Project>

</Application>
<<EOF>>
```

When we start the uniPaaS Project it show the following window.

Connect To Server

After we introduce the user and password we need to select the repository.

We have a Project in each Repository. Their names are the same, by example the project **FASTAG** is in the Repository **FASTAG.**

We have two questions about this procedure for connect with the corresponding project/repository.

1. Can we skip these two displays and go into the project directly?
2. If not, Can we skip the second display?
